

Why Choose EDMCI?

EDMCI is a turn-key control systems integrator for the conveyor and controls industry. From engineering and programming to panel building and installation. We use only the highest quality materials, controls and people to complete each project on time and in budget.

EDMCI employees are the top design engineers, AutoCAD specialists, product specialists and programmers to deliver engineering packages second to none in the industry.

EDMCI owns and operates a panel shop that is UL508A approved and builds to the strictest standards. Our panel builders take pride in delivering panels that are especially well planned, contain room for expansion and are well labeled and easy to work in. They are also impeccably neat. Our customers continually express their appreciation of our attention to detail.

EDMCI employees are the top trained field technicians in the industry. Even though they are certified by the state as electricians, we call them technicians because of the controls skill level they each possess. They truly work together to provide the highest quality job done on time.

At Electrical Design, what we value most are the relationships we have with each other and our customers. We care about providing our customers with the best products and the best services and we can do that because of the relationships we have cultivated in our company and with our customers
